

How IFS Cloud is making construction fit for the future

Construction is one of the biggest sectors in the world economy, accounting for \$10 trillion a year – that's 13% of global economic output.

But it's also **one of the most fragile**.

Low profit margins mean that even a 1% increase in costs can make the difference between profit and loss.

Major challenges facing the industry today include:

Low productivity

Thin profit margins

Inability to deliver projects on time, on budget and to a high enough quality

Implementing best practice is key to tackling these challenges successfully.

IFS Cloud solutions, implemented by Muzulu, support best practice in construction processes such as:

Bid to contract

Construction and execution

Commercial

Periodic project review

Planning and pre-construction

Procurement and material supply

IFS Cloud empowers constructors to become more agile, enhance visibility, improve overall control, and adapt to new ways of working so that they're truly fit for the future.

Muzulu is an IFS Trusted Service Partner with many years of experience in implementing IFS ERP solutions, including in the construction industry.

Book a call with our team to discuss what IFS Cloud can do for your construction business.
